

The Ceramic Advantage

Widely used since ancient times, Ceramic colors possess unrivaled durability and color fastness. W.A. Wilson's Ceramic Paints are based entirely on high-performance Ceramic materials.

You gain the benefits:

- True lightfastness ensures that there is no visible difference between old glass and new glass, older installation and newer, original parts and replacements.
- Ceramic enamels are actually fused onto the surface of the glass itself; they will not delaminate, blister or crack.

- Ultimate chemical resistance means that Ceramic enamels will not fade, stain, or discolor upon contact with glazing compounds, sealants or gasketing materials.
- Ceramic enamels are hard, as hard as the glass itself. They won't scratch or mar during fabrication or installation.
- Every color is "green." Fired-on Ceramic enamels are non-toxic, non-combustible, and easy to dispose.
- Exceptional green strength produces maximum yields and minimal scrap - all with unparalleled ease of handling.
